Operating Guide

Model
CA-SOS

Model CA-SOS is an optional accessory for the **CentralAlert**™ Visual Alert System. It is a wireless personal pager designed for paging HELP.

When activated, a wireless signal is sent to a **CentralAlert**™ Master-Unit. This activates all alerting outputs while "SOS" is shown on its display.

Model CA-SOS is a water-resistant design and is supplied with a lanyard. The unit can be mounted inside a shower stall or near a bathtub.

Install batteries:
1. Verify that the (green) **TRANSMIT** indicator blinks when the SOS button is pressed.

2. This indicates the unit is working normally.

Registering Model SOS:
Model CA-SOS must be learned by a Master-Unit in order to work with the system.
1. Press and hold the **"SOS/Test"** button on the **CentralAlert**™ Master-Unit for about 5 seconds (in **RUN** mode) to set it to a Learn mode. Digital display shows "**LEAr**."
2. Press and hold the **"SOS/Test"** button on Model CA-SOS for about 5 seconds until the Master-Unit responds.
3. Registration is now completed. Press the "**SNOOZE/RESET**" button on the Master-Unit to end the Learn mode.
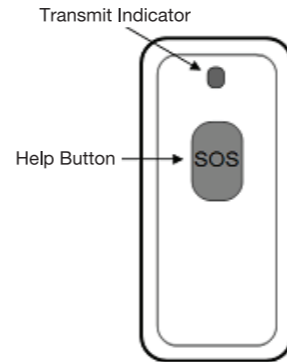

Testing:
1. Press the **"SOS/Test"** button to test.
2. Confirm that the Master-Unit activates all alerting outputs in response.

Installation:
1. Model CA-SOS comes with a lanyard and may be worn as a personal pager. It can also be mounted near any convenient place such as bathroom or kitchen (use a piece of 1" x 1" double sided sponge tape).
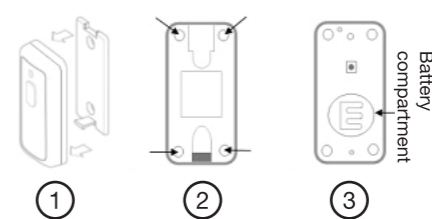

Transmit Indicator

Help Button → SOS

Replace Battery:
1. Press on latch to separate SOS button from back plate.
2. Unscrew screws from corners, separate center section from unit.

Battery compartment
